### **DETAILED ACTION**

The following is a first action on the merits of application serial no. 10/520,937 filed January 12, 2005.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

### ***Drawings***

The drawings are objected to because in Figures 1 and 2 reference numbers "6" and "7" should be changed to --16-- and --17-- respectively. Reference number "16" should be changed to --6--. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must

be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Bokkers et al. (6,016,774). Bokkers et al. discloses a cooling module for an engine of a motor vehicle, having a heat exchanger (20), at least one fan (46) and a coolant pump (14), characterized in that part of the cooling module is a module frame within which and/or on which the coolant pump (46) is arranged.

Regarding claim 2, the frame is supporting component of the cooling module.

Regarding claim 3, the cooling module has a valve (47).

Regarding claim 4, the valve (47) is connected to the coolant pump (14) as a constructional unit.

Regarding claim 5, the cooling module has a sensor for regulating the coolant temperature, which sensor is integrated into the cooling module. ( see column 4, lines 5-11)

Regarding claim 6, the cooling module is a control module (16).

Regarding claim 7, the control module is connected to an external control module via an interface. (see column 4, lines 5-11)

Regarding claim 8, the connection of the coolant pump is arranged approximately in the center of one side of the module frame.

Regarding claim 9, the coolant pump and/or the valve is/are aligned parallel to the region of the module frame, in which the coolant pump and/or valve is fixed.

Regarding claim 10, a connection is provided for that part of the coolant circuit through which the flow passes parallel to the heat exchanger, which connection is aligned in the axial direction of the coolant pump.

Regarding claim 11, a flexible connecting means (45) is arranged between the outlet of the heat exchanger (20) and the inlet of the coolant pump.

Regarding claim 12, the coolant pump is arranged on the module frame in such a manner that cooling air can flow around the electronics of the coolant pump (14).

Regarding claim 13, the module frame and the cooling fan housing form a constructional unit.

Regarding claim 14, a bypass (43) is formed in an integrated manner.

**Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 5,970,925 issued to Lakerdas et al. is a similar system.
